

Keeping the your server healthy has become a major part of CCTV maintenance. Soon it will be a fact of life that you go into your CCTV server and make windows updates. In order to do this safely you would need to have the comfort that any update you made would not affect the VMS, with our SMA in place this would give you the peace of mind that you could up-date the VMS and camera firmware all at the same time as updating windows.

All software takes lots of development time and lots of people to do this development work. The Ernitec EVR software is no different, we have over 50 engineers working on our software making improvements to current versions, new camera drivers and exciting new features for the future.

In the last three years we have made massive improvements in our software and at the same time hardware has taken a big leap forward enabling software to do more things. Just think 3 years ago would you have expected windows to stop supporting XP? But here we are in 2104 and they have.

It's for reasons like this that we have introduced our SMA concept, by adding SMA to your Ernitec VMS purchase you are safeguarding the future of your system. During the life time of your CCTV system we will be bringing out new major versions and if you have an SMA in place these new versions will be included in the support contract to you and they will be free of charge. You can set up an SMA for a single year and renew them each year or purchase several years all in one go. You can also tie our SMA into the maintenance agreement that you offer your customer.

Features

- **Software Upgrades:** all Ernitec EVR new software versions are available at no extra cost for the life of your SMA contract.
- **License Modifications:** no charge for the service to carry out license modifications such as upgrades, extensions and change of hardware
